<i>Preface</i>	<i>page</i> 1
1 Inviscid Flows	8
1.1 The Basics	8
1.1.1 Pathlines and Streamlines	10
1.1.2 The Material Time Derivative	12
1.1.3 Conservation of Mass	13
1.1.4 The Stream Function	14
1.2 The Euler Equation	15
1.2.1 Under Pressure	17
1.2.2 The Euler Equation Is Just Momentum Conservation	20
1.2.3 Archimedes' Principle	21
1.2.4 Energy Conservation and Bernoulli's Principle	23
1.3 Vorticity	26
1.3.1 The Biot–Savart Law	30
1.3.2 The Vorticity Equation	32
1.3.3 Kelvin's Circulation Theorem	35
1.3.4 Helicity	38
1.4 Potential Flows in 3d	40
1.4.1 Boundary Conditions	41
1.4.2 Flow Around a Sphere	42
1.4.3 d'Alembert's Paradox	46
1.4.4 A Bubble Rising	48
1.5 Potential Flows in 2d	50
1.5.1 Circulation Around a Cylinder	52
1.5.2 Lift and the Magnus Force	54
1.6 A Variational Principle	56
1.6.1 The Principle of Least Action	56
1.6.2 An Action Principle for Fluids	60
2 The Navier–Stokes Equation	65
2.1 Stress, Strain, and Viscosity	68
2.1.1 Newtonian Fluids	71
2.1.2 Momentum and Energy Conservation Revisited	73
2.1.3 Claude-Louis Navier (1785–1836)	75
2.2 Some Simple Viscous Flows	76

2.2.1	The No-Slip Boundary Condition	76
2.2.2	Couette Flow	77
2.2.3	Poiseuille Flow	80
2.2.4	Vorticity Revisited and the Burgers Vortex	81
2.3	Dimensional Analysis	84
2.3.1	The Reynolds Number	85
2.3.2	Scaling	88
2.4	Stokes Flow	90
2.4.1	Flow Around a Sphere	91
2.4.2	Uniqueness and the Minimum Dissipation Theorem	96
2.4.3	Eddies in the Corner	99
2.4.4	Hele-Shaw Flow	103
2.4.5	Swimming at Low Reynolds Number	105
2.5	The Boundary Layer	109
2.5.1	Prandtl's Boundary Layer Equation	111
2.5.2	An Infinite Flat Plate	114
2.5.3	Boundary Layers with Pressure Gradients	117
2.5.4	Separation	120
3	Waves	126
3.1	Surface Waves	126
3.1.1	Free Boundary Conditions	127
3.1.2	The Equations for Surface Waves	128
3.1.3	Group Velocity and Dispersion	136
3.1.4	Water Off a Duck's Back	138
3.1.5	Surface Tension	139
3.2	Internal Gravity Waves	142
3.3	An Introduction to Geophysical Flows	145
3.3.1	The Shallow Water Approximation	146
3.3.2	Geostrophic Balance and Poincaré Waves	148
3.3.3	We Need to Talk About Kelvin Waves	153
3.3.4	Rossby Waves	154
3.3.5	Equatorial Waves	156
3.3.6	Chiral Waves Are Topologically Protected	161
3.4	Sound Waves	165
3.4.1	Compressible Fluids and the Equation of State	165
3.4.2	Some Thermodynamics	167
3.4.3	The Equations for Sound Waves	171
3.4.4	Briefly, Heat Transport	175
3.4.5	Viscosity and Damping	177
3.5	Non-Linear Sound Waves	180
3.5.1	The Method of Characteristics	181
3.5.2	Soundcones	184
3.5.3	Wave Steepening and a Hint of Shock	186

3.5.4	Burgers' Equation	190
3.5.5	Traffic	192
3.6	Shocks	194
3.6.1	Jump Conditions	196
3.6.2	Shocks Start Supersonic	200
3.6.3	On Singularities and Physics	202
3.7	Biological Waves	205
3.7.1	The Fisher–KPP Equation	205
3.7.2	Front Propagation in Bistable Systems	212
4	Instabilities	217
4.1	Kelvin–Helmholtz Instability	218
4.1.1	The Simplest Instability	221
4.1.2	Rolling Up the Vortex Sheet	223
4.1.3	Gravity Helps. Surface Tension Helps Too	225
4.1.4	The Rayleigh–Taylor Instability	226
4.2	Centrifugal Instability	227
4.2.1	Perturbation Analysis	230
4.2.2	Circular Couette Flow Revisited	232
4.2.3	G.I. Taylor (1886–1975)	233
4.3	Jet Instability	233
4.3.1	Gravity Makes the Flow Thinner	237
4.4	Rayleigh–Bénard Convection	238
4.4.1	The Boussinesq Approximation	239
4.4.2	Perturbation Analysis	242
4.5	Instabilities of Inviscid Shear Flows	247
4.5.1	Rayleigh's Criterion	249
4.5.2	Fjortoft's Criterion	251
4.5.3	Howard's Semi-circle Theorem	253
4.5.4	Couette Flow Revisited	255
4.6	Instabilities of Viscous Shear Flows	257
4.6.1	Poiseuille Flow Revisited	259
4.7	Lessons from Dynamical Systems	261
4.7.1	Turing Instability	261
4.7.2	Transient Growth	266
4.7.3	Very Briefly, Transient Growth in Fluids	269
5	Turbulence	271
5.1	Mean Flow	272
5.1.1	The Reynolds Averaged Navier–Stokes Equation	274
5.2	The Energy Cascade	277
5.2.1	The Zeroth Law of Turbulence	277
5.2.2	Some Dimensional Analysis	280
5.2.3	Scale Invariance	282

5.2.4	Viscosity Brings the Cascade to a Halt	285
5.3	Velocity Correlations	287
5.3.1	Navier–Stokes for Correlation Functions	290
5.3.2	The Structure of the Three-Point Function	294
5.3.3	The von Kármán–Howarth Equation	296
5.3.4	Kolmogorov’s 4/5 Law	297
5.3.5	Briefly, Intermittency	300
5.3.6	Andrey Kolmogorov (1903–1987)	301
6	Kinetic Theory	302
6.1	Things Bumping Into Other Things	303
6.1.1	The Maxwell–Boltzmann Distribution	305
6.1.2	A First Look at Collisions	307
6.1.3	Viscosity	309
6.1.4	Thermal Conductivity	313
6.2	From Liouville to BBGKY	314
6.2.1	The BBGKY Hierarchy	318
6.3	The Boltzmann Equation	322
6.3.1	Motivating the Boltzmann Equation	322
6.3.2	A Better Derivation of the Boltzmann Equation	326
6.3.3	Equilibrium	334
6.4	The H-Theorem	337
6.5	Towards the Equations of Fluid Mechanics	340
6.5.1	Conserved Quantities	341
6.5.2	Local Equilibrium and the Euler Equation	346
6.6	From 10^{23} Atoms to Navier–Stokes	348
6.6.1	Relaxation Time Approximation	350
6.6.2	Thermal Conductivity	352
6.6.3	Viscosity Revisited	353
7	Diffusion	357
7.1	The Heat Equation	359
7.1.1	Conserved Quantities Diffuse	360
7.1.2	Diffusion on a Finite Interval	362
7.1.3	How to Cook a Turkey	364
7.1.4	Diffusion on the Line	365
7.2	The Langevin Equation	369
7.2.1	Diffusion in a Very Viscous Fluid	370
7.2.2	Diffusion in a Less Viscous Liquid	372
7.2.3	The Einstein Relation	374
7.2.4	Noise Probability Distributions	375
7.3	The Fokker–Planck Equation	378
7.3.1	The Diffusion Equation for Probabilities	379
7.3.2	Meet the Fokker–Planck Equation	380

7.3.3	Velocity Diffusion	386
7.3.4	Fokker, Planck, Schrödinger, and Feynman	388
7.3.5	Briefly, Stochastic Calculus	393
